# AccuTherm Shaking Incubator

Labnet entered into the constant temperature equipment market more than 15 years ago when we first introduced our laboratory incubators and ovens. Since that time our product offering has grown to more than 20 constant temperature equipment products. The newest addition to the line is the AccuTherm, a temperature controlled vortexer that uses peltier technology to rapidly heat and cool precious samples. The combination of heating/cooling with mixing makes the AccuTherm ideal for many life science research applications in the fields of molecular biology, biochemistry and clinical chemistry.

It's compact footprint incorporates an intuitive control panel with a large multicolor display, which allows users to easily program and view temperature, time and speed settings. Eight interchangeable aluminum blocks accommodate PCR plates and a variety of common tube sizes, including a combination block that hold both 0.5mL and 1.5mL tubes. Designed to meet the high-paced demands of today's lab, the exceptional performance of this product make it an essential part of your daily research.
