

ScruffGuard

Handle and dose small animals gently whilst avoiding bites and needlestick injuries.

Available in disposable eco-friendly sugar cane pulp formats.

ScruffGuard

ScruffGuard enables you to handle and dose small animals gently, whilst avoiding bites and needlestick injuries.

ScruffGuard can be used when administering substances by subcutaneous, intraperitoneal and intramuscular routes. It can be used to implant microchips subcutaneously for identification purposes. A ScruffGuard is particularly helpful for trainees who are learning to handle small animals for the first time.
